[Abstract]

[Problem]

An Internet boutique system, selling method thereof and memory medium recorded the method thereof are disclosed for displaying an image of a user in combination with the image of a commodity to allow the user to determine whether the commodity will fit the user or not.

[Means for solving the problem] In user terminal 2, the coordination program is executed by downloading from server 1. User image manager 231 which is realized by the execution of coordination program prompts to input user image from image capturing device 3 to register the user image in user image database 232. Subsequently, Coordination processor 233 prompts the user to select the commodity type. When the commodity type is selected, captures the image of the commodity registered in the selected type from server 1 to display. Then prompt the user to select the image of desired commodity. The selected image is displayed in combination with the user image at his appropriate portion. User registers the satisfied commodity to the to purchased commodity database 18 in server 1.
